National Projects

2008 – 2010 **Smart Bandwidth Manager (SBM)**, *IT Center, Isfahan University of Technology*, Isfahan, Iran [link](#).

SBM is a dynamic network bandwidth management software that smartly controls and manages bandwidth of a network of sub-centers based on predefined priorities and limits of sub-centers and tries to keep total usage bandwidth on specific value. SBM works with Cisco Internetwork Operating System (Cisco IOS) of Routers and Switches. It was tested on internet bandwidth of Isfahan University of Technology and finally **SBM saves 48,000\$ per year**.

Motivation: When I was highschool student with my friend Morteza Parsa were doing research about Network Bandwidth Management at IT Center of Isfahan University of Technology. The internet usage bandwidth of the university was fixed at its maximum value (60 Mbit/sec) in office hours but in other hours decreased to 1/3 of its maximum value. We designed an efficient dynamic algorithm to assign free (unused) internet bandwidth to sub-centers which need. Afterward we implemented this algorithm to a software named "*Smart Bandwidth Manager (SBM)*".

Awards & Grants:

- **Ranked 2nd in 11th Iran's National Youth Kharazmi Award**, Minister of Science, Research and Technology & Minister of Education, 2009.
- **Iran's National Elites Foundation Research Grant**, Vice President for Science and Technology, Government of Iran, 2010.

- Isfahan Province Education Organization Award, Presidents' Organization, 2010.
- Research Council of Isfahan Province Education Organization Award, Presidents' Organization, 2010.

Other Projects

2007 – 2010 **Electronic Library (eLibrary)**, *IT Center, Isfahan University of Technology*, Isfahan, Iran.

eLibrary enables users to search the profiles (metadata such as title, authors, ISBN, publisher, year, ...) of several thousands ebooks and eventually view the specific ebook that they are looking for. Technically eLibrary consists of both desktop and web applications. In desktop part "eBook Scanner" is responsible for scanning specific hard drive to find ebooks, reading their metadatas and storing them in database. In web part "eBook Search" and "eBook Treeview" enables users to search in metadata and subject (treeview display) respectively. Some other applications was designed for managing this system in both desktop and web part. eLibrary was designed for faculty members and students of university to focus on research and get ebooks in one click. **eLibrary was sold to two universities (Tafresh University and Islamic Azad University of Majlesi) each payed 8000\$.**

2011 – 2013 **Electronic Content Management System (eCMS)**, *Isfahan Science & Technology Town (ISTT)*, Isfahan, Iran.

eCMS is a research project which its important task is extraction metadata such as title, authors, ISBN, publisher, year, ... from ebook files (pdf, djvu, djv, epub, mobi, ...). eCMS can extract metadata from ebook files and check them with LoC website for validity then stores these information in database in order to use by eLibrary. It also extracts covers from ebooks and use Tesseract OCR technology for scanned ebooks.
